# DETAILED ACTION

### Claim Objections

Claims 9-15 are objected to because of the following informalities: Claim 8 recites a "DVD ROM chipset testing board" while claims 9-15 recite the "DVD ROM testing board as recited in claim 8" providing unclear claim recitations. Appropriate correction is required.

#### Claim Rejections - 35 USC § 103

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent

Application Publication No. 2003/0101391 to Man et al. in view of U.S. Patent No. 5,663,966 to

Day et al..

Regarding claim 8, Man et al. disclose a system for testing multiple devices on a single system and method having a testing base (Fig. 4, element 420), having at least one chip socket (434) for plugging the DVD ROM chip-set (paragraph 13), and a connector (425) for coupling to a testing device of the DVD ROM chipset, wherein the testing device provides a digital input signal/command signals (paragraph 13). Man et al. does not disclose phase -shift RF-signal generating circuits according to the input test signals. Day et al. disclose a system and method for scan based testing including a testing device providing a digital input signal with varied frequency (column 8 lines 8-14), a phase-shift RF-signal generating circuit (column 8 lines 13-45), according to the digital data input signal, for generating a first phase-shift RF-signal, a second phase-shift RF signal, a third phase-shift RF signal, and a fourth phase-shift RF signal for testing a chipset/chip wherein the first phase-shift RF signal and the second phase-shift RF signal are in phase, and are differed by a phase shift from the third phase-shift RF signal and fourth

Application/Control Number: 10/656,006

Art Unit: 2858

phase-shift RF signal (column 8 lines 48-67). It would have been obvious to one of ordinary skill in the art at the time the invention was made to include the phase-shift RF signal generating circuits as taught by Day et al. into Man et al. for the purpose of allow concurrent testing of multiple section of one or more chips under scan test and to reduce simultaneous switching.

#### Allowable Subject Matter

Claims 9-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance:

Regarding claim 9:

The primary reason for the allowance of claim 9 is the inclusion of first and second potential dividers and first, second third and fourth high pass filters. It is these features found in the claim, as they are claimed in the combination that has not been found, taught or suggested by the prior art of record, which makes this claim allowable over the prior art.

Claims 10-15 would be allowed due to dependency on claim 9.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### Conclusion

Art Unit: 2858

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following is cited to further show the state of the art with respect to methods and devices for testing chipsets:

- U.S. Patent No. 6,880,116 to Man et al. disclose a system for testing multiple devices on a single system.
- U.S. Patent Application Publication No. 2003/0057940 to Tanimura discloses a testing board apparatus including a timing generator for generating multiple input signals.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Teresinski whose telephone number is (571) 272-2235. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie Lefkowitz can be reached on (571) 272-2180. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
